Re: FabriSPAN® 1017176 - Fabric Transparency Report

Mr. Remshard

We completed testing of the fabric option supplied to PMI for use in the Hurst Media Room. Please see below for our findings and recommendations.

The fabrics tested were by FabriTRAK Systems, inc. The name shown here reflects how the sample was labeled.

FabriSPAN® 1017176

The acoustical transparency performance of this fabric is rated Good with a -3.0 dB loss at 10kHz and is approved for acoustical use to cover acoustical treatments and surround speakers if they are equalized.

See performance charts on next page for test results

Best Regards
