AUTEM™ installed on ceiling above HVAC and lighting fixtures in black.

What is **AUTEM™**?

AUTEM™ is an interior acoustic solution that absorbs noise and mitigates sound reverberation, so that sound quality is crisp, clear and assures a safe hearing environment.

Engineered to Perform

AUTEM™ is designed for superior sound absorption and is both lightweight and easy to install and it fits into the acoustic solutions project budget. The product is customizable in shape and size, as well as thickness and comes in 3 colors: black, white and grey.

Durable, Strong, Sound

While **AUTEM™**s NRC ratings are higher than most acoustic ceiling products, the beauty of the system lies in its simplicity. Architects include **AUTEM™** in their specifications, interior designers incorporate **AUTEM™** into their design plans for new builds. **AUTEM™** is also the perfect product for any retrofit and renovation as it can be custom sized on site. **AUTEM™** can be directly applied to any ceiling substrate or corrugated metal ceiling, reducing labor costs. Because the product is so easy to work with, there is no worry that the material will chip or crumble like a typical ceiling tile or cause irritation like a fiberglass product. The product may also be used as an acoustic ceiling tile and cut to fit any drop ceiling system.

For today, for the future

AUTEM™ is an environmentally friendly product, containing over 80% of post-consumer recycled material. Manufactured without the use of water and 100% recyclable, **AUTEM™** is ideal for LEED v4 spaces and is certified DECLARE. **AUTEM™** is safe, naturally non-allergenic and non-irritant, and is free of all VOCs.

In addition to considering the exterior environment, users of interior spaces with **AUTEM™** are ensured of health benefits – the product does not mold or retain moisture. Above all, due to high NRC values, **AUTEM™** enhances sound performance, mutes unhealthy noise and creates areas that are safe for hearing – whether in a small conference room or large industrial warehouse.
